## Distance-Based Fares - Sample Pricing

The following is an example scenario for the application and pricing of distance-based fares.

The price for each trip made is based on the straight line distance between the trip start and end point, regardless of the number of transfers required to complete the trip.

For this example, a rate of $\$ 0.40$ per kilometer was used. In addition, minimum and maximum trip pricing of $\$ 2$ and $\$ 5$, respectively, was used.

NOTE: Per kilometer rate and minimum and maximum trip pricing is subject to City Council approval.
