

High Priority Sidewalk Index

This conceptual map shows the layering of the data, to illustrate how the High Priority Sidewalk Index is developed and defined. Note: additional validation of the Index and development of the High Priority Network, will come from future Public Stakeholder engagement.

Attachment 7

Note: Sidewalks that are red in the High Priority Sidewalk Index map to the right have both high scores for pedestrian/sidewalk importance as well as equity/social vulnerability importance. Yellow/blue zones indicate areas where there is a high score in one of the indices and not both, or a medium priority in both indices. The green zones indicate areas where both indices scored lower and hence results in the lowest overall priority.
