

### Out of Scope Deliverables

The following items are **out of scope** for the River Valley Planning Modernization project:

- Site-specific or field-based technical reports. All technical reports for the River Valley Planning Modernization will be completed at a desktop level; more detailed assessment and analysis, including field studies, is anticipated for future phases of implementation.
- Development of open space concept plans, master plans, and detailed designs.
- Detailed trail planning, including the identification of recreational trail networks. The Ribbon of Green includes only the primary trail network, which provides access to and connectivity through the study area.
- A trail management plan, including direction for trail maintenance, repair, and restoration; the Ribbon of Green includes strategic-level direction for the primary trail network only.
- Development of detailed procedures and technical standards for site-specific planning and decision-making processes. These will be developed as part of subsequent implementation, following completion of the River Valley Planning Modernization work.
