Mass Transit: Planning for 1.25 Million People

What Does Success Look Like?

Four success factors that are key to supporting the mass transit network for 1.25 million.

1. Mass Transit Priority

Converting vehicle lanes to dedicated transit lanes represents a significant shift in our approach that will help to increase transit capacity, improve reliability, reduce travel times, and provide opportunities for service to respond to ridership growth. Ultimately, faster and more frequent service will result in ridership gains as transit service better competes with travel by personal vehicles.

2. Future Development Opportunities

Mass transit succeeds when paired with supportive land uses like higher-density residential and commercial developments, particularly in priority growth areas. This further highlights the role of The City Plan and how the **nodes and corridors** approach is a key part of our transportation planning.

3. Fill in Network Gaps and Parallel Corridors

Our current LRT network serves parts of the city, but there are areas that don't have access to this service. There is a chance to capture ridership through transit service and infrastructure that costs less than LRT, such as bus-based mass transit, to provide a city-wide mass transit network. As well, bus-based mass transit routes that run parallel to LRT lines can provide alternative mass transit routes to the LRT, parts of which are near capacity during the weekday peak periods.

4. Parking Policies and Mobility Hubs

Parking pricing and availability, including Park and Ride and the development of mobility hubs, will allow people to connect to the mass transit network by local transit, car, bike, walking or rolling.

Resilience, Livability, Affordability

A photograph of a beaver in a pond, partially submerged, with its reflection in the water. The beaver is surrounded by reeds and grasses. A green rectangular box is overlaid on the right side of the image, containing white text. In the bottom left corner, there is a small circular icon with a white camera-like symbol.

4. Nature-based solutions to climate change
