Bylaw 17260

A Bylaw to adopt the Jasper Place Area Redevelopment Plan

WHEREAS pursuant to the authority granted to it, City Council considers it appropriate to provide planning policy to guide the future redevelopment of certain lands within the Britannia Youngstown, Canora, Glenwood and West Jasper Place neighbourhoods generally between 107 Avenue, 149 Street, 95 Avenue and 170 Street/Mayfield Road, known as Jasper Place; and

WHEREAS the Municipal Council of the City of Edmonton now deems it in the public interest to pass the Jasper Place Area Redevelopment Plan Bylaw; and

NOW THEREFORE after due compliance with the relevant provisions of the Municipal Government Act RSA 2000, ch. M-26, as amended, the Municipal Council of the City of Edmonton duly assembled enacts as follows:

1. The lands shown outlined on Figure 1 of Schedule "A" are hereby designated as a redevelopment area pursuant to Section 634(a) of the Municipal Government Act, S.A. 2000, c. M-26, for the purposes defined therein.

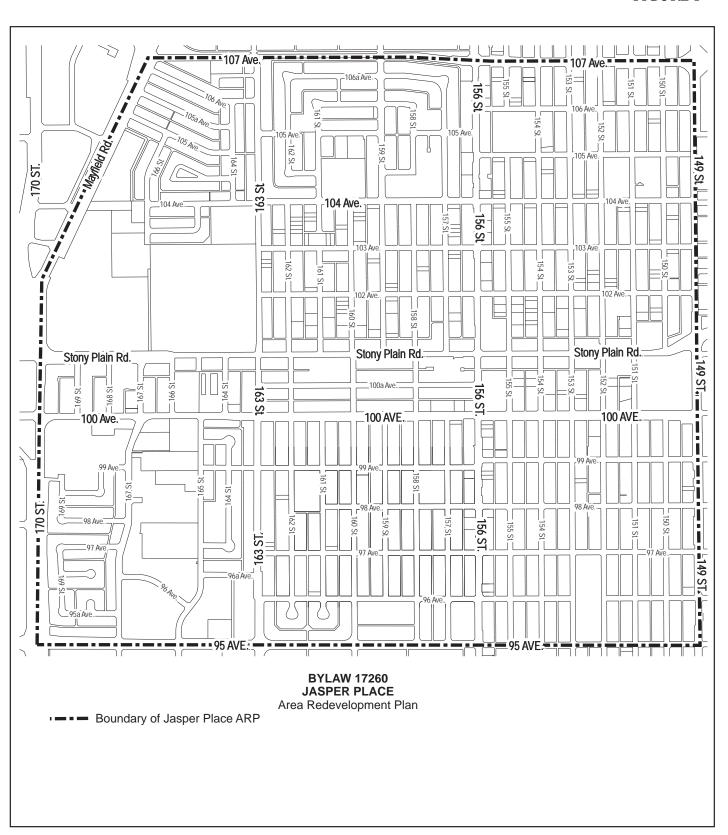

the Jasper Place Area Redevelopment Plan pursuant Section 634(b) of the Municipal Government Act,

The Jasper Place Area Redevelopment Plan annexed hereto as Schedule "A" is hereby adopted as

2.

Area Redevelopment Plan

Edmonton

Executive Summary

Jasper Place is an established community where people live, work and play. The Jasper Place Area Redevelopment Plan (ARP) provides a tool to help guide growth and change over the next 15 to 20 years. The ARP supports a safe, livable, and resilient community by providing guidance designed to make the most of the exciting opportunities in the area.

Jasper Place is defined as the neighbourhoods of Britannia Youngstown, Canora, Glenwood, West Jasper Place, and a portion of the Stony Plain Road commercial corridor. The ARP highlights redevelopment opportunities in Jasper Place, and provides guidance on future land use and City investment decisions in the area. It sets out land use policies in each of the four neighbourhoods, with additional policies for a Stony Plain Road focus area. It also sets out civic infrastructure policies to guide investment decisions on parks and open space, mobility, and utilities infrastructure. The ARP is intended to help make Jasper Place more livable for existing residents and businesses, and to ensure new community members are welcomed and accommodated in the area to support vibrant neighbourhoods, schools and businesses.

How to read this plan

The Introduction provides an overview of the ARP process and the existing policy framework. It also summarizes the community input and technical studies that informed the ARP.

The Plan Vision sets out the overall vision for Jasper Place and shows how the City policy framework, community input and technical studies have come together to form a set of guiding principles.

Objectives and Policies set out land use and civic infrastructure maps and policies to help guide future land use decisions and City investment in Jasper Place.

Amendments + Monitoring provides a long-term plan for the ARP to ensure it remains up to date and is successfully implemented.

The Glossary provides definitions of key terms used in the ARP.

Readers

Achieving the vision of the ARP depends on a wide variety of stakeholders, and each stakeholder needs different types of information from the ARP to contribute to the success of the plan. Find out what sections may be most relevant to you.

Current and future residents The Plan Vision provides an overall vision and guiding principles for Jasper Place. The Objectives and Policies set out specific guidance on the type of buildings, parks and infrastructure that are envisioned for the area.

Homeowners, property owners and businesses The Objectives and Policies land use chapter sets out what opportunities may be available on your property. It provides direction for redeveloping your property under existing zoning and opportunities for rezoning. The civic infrastructure chapter also highlights potential infrastructure upgrades that may be needed to support redevelopment.

City staff reviewing rezoning or development applications The Objectives and Policies land use chapter provides guidance for rezoning and discretionary development decisions. It also includes civic infrastructure policies that provide guidance on mobility or utility infrastructure requirements that may exist for individual applications. 3.2 Section structure provides important information for interpreting the policies and the process for plan amendments is provided in the Amendments + Monitoring section.

City staff responsible for capital projects The Objectives and Policies civic infrastructure chapter sets out priority projects and guidelines to be considered in any related capital projects, subject to Council prioritization and approval of funding. 1.3.3 Observations and technical studies highlights important information for capital projects.

Institutional partners including school boards, emergency services, and utilities companies can find information about the future vision of the area in the Plan Vision and Objectives and Policies sections.

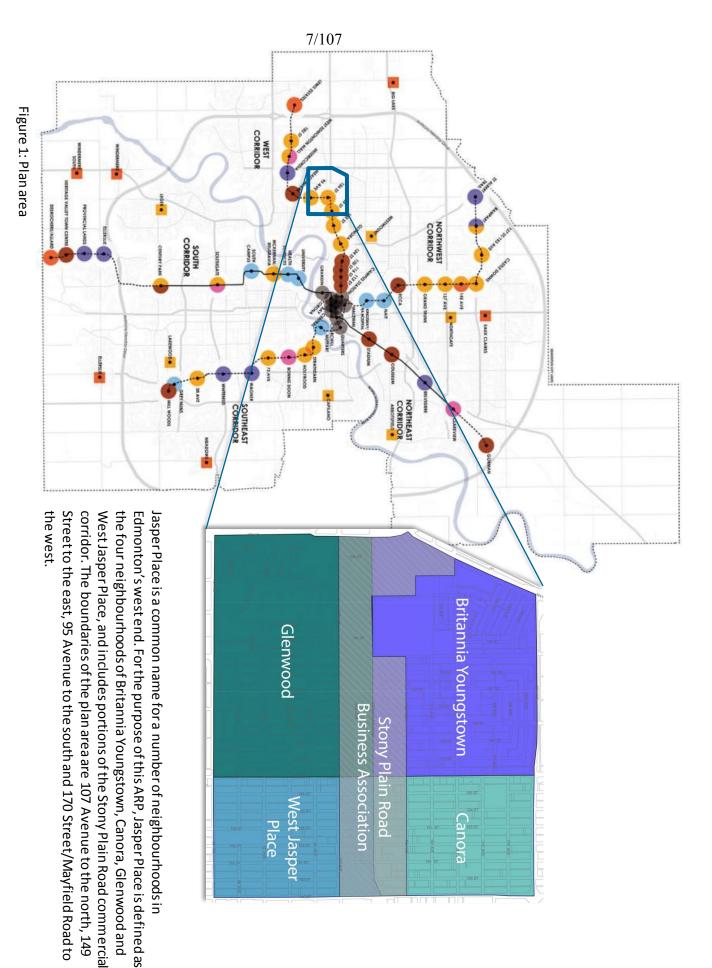

Mayor and Council The Plan Vision sets out the intent behind the ARP policies and the guiding principles these policies were based on.

1. Introduction

Jasper Place is an established community where people live, work and play. The Jasper Place Area Redevelopment Plan (ARP) provides a tool to help guide growth and change over the next 15 to 20 years. It supports a safe, livable and resilient community by providing guidance designed to make the most of the exciting opportunities in the area.

The ARP highlights redevelopment opportunities in Jasper Place, and provides guidance on future land use and City investment decisions in the area. The ARP is intended to help make Jasper Place more livable for existing residents and businesses, and to ensure new community members are welcomed and accommodated in the area to support vibrant neighbourhoods, schools, and businesses.

Throughout the ARP process, City staff collaborated with internal departments, spoke with Jasper Place community members, and worked with various technical experts to develop the vision and policies of the Jasper Place ARP.

In this introductory section of the ARP you can learn about:

- 1.1 The Plan area and the neighbourhoods included in the ARP
- 1.2 The Plan purpose, including what an ARP is, why one was undertaken in Jasper Place, and how to use this plan.
- 1.3 The Plan framework, including the City policies, community input and technical information that informed the plan.

1.1 Plan area

For the purpose of this ARP, Jasper Place is defined as the neighbourhoods of Britannia Youngstown, Canora, Glenwood, West Jasper Place and a portion of the Stony Plain Road commercial corridor. Jasper Place is located in west Edmonton and is bounded by 149 Street to the east, 170 Street to the west, 107 Ave to the North and 95 Ave to the south.

1.2 Plan purpose

The Jasper Place ARP is a forward-looking document that provides a clear vision of how the area is expected to change and grow over the next 15 to 20 years. The ARP provides current and future residents, businesses, and landowners clarity about what types of change and investments may be expected for their neighbourhoods.

The ARP builds on the existing land use assets of the neighbourhood that were identified by community members and technical studies, including its strong walkability and street pattern, access to existing bus transit and future LRT, mix of uses, and sense of openness.

The ARP also seeks to enhance other themes that were highlighted throughout the process, including promoting a safe neighbourhood, encouraging more housing choice, supporting vibrant commercial areas, and introducing new open space.

The Jasper Place ARP provides opportunities for residents and landowners to capitalize on the potential of the Jasper Place area and to welcome new investment, businesses and residents that will support a vibrant community.

The ARP sets out a vision and opportunities that will guide future rezoning decisions and City investment in Jasper Place .

1.2.1 What is an Area Redevelopment Plan (ARP)?

An ARP is a statutory plan that is formally adopted by Council as a bylaw. Once it is adopted, ARPs must be considered by City staff when evaluating rezoning and discretionary development decisions in the plan area. In this way, ARPs play an important role in shaping change and growth in existing areas of the City.

An ARP is formally defined by the Municipal Government Act (MGA) of Alberta. The MGA states that an ARP can be used to:

- Preserve or improve land and buildings
- Construct, rehabilitate, replace or remove buildings
- Establish, improve or relocate roads, public utilities or other services
- Facilitate any other development

All plans adopted by Council, including ARPs, must be consistent with all other applicable plans, policies and guidelines already approved by Council. This means that the ARP must reflect the policies in documents such as the City's Municipal Development Plan, *The Way We Grow*, and other plans described in Section 1.3.1: Existing policies.

The MGA also requires that opportunities be provided for members of the public, school boards and other affected parties to provide input into the ARP. More information on the consultation activities for the Jasper Place ARP is provided in Section 1.3.2: Consultation.

The Jasper Place Area Redevelopment Plan meets the requirements of the MGA.

1.2.2 Why an ARP in Jasper Place?

In 2009 City Council endorsed a Revitalization Strategy for Jasper Place. The Revitalization Strategy was developed through collaboration with the Jasper Place communities, and continues to be supported through the work of local volunteers. The Strategy identified three main priorities for Jasper Place:

- Feeling Safe in Our Community
- Connecting with Our Community
- **Building Our Community**

A series of visions, goals and action items were developed under each of these three priorities. One of the long term action items identified in the *Strategy* was the creation of an ARP for each of the four Jasper Place neighbourhoods.

A series of City-wide policies, outlined in Section 1.3.1, and the expansion of Light Rail Transit (LRT) Valley line also led to an ARP being undertaken in Jasper Place. The approved alignment of the LRT route identifies three new LRT stations in Jasper Place. City policy directs that change and growth should be focused around transit and LRT stations, therefore the three new stations are likely to be a catalyst for investment and change in Jasper Place.

1.2.3 When to use this plan

Purchasing, redeveloping or renovating properties

The ARP sets out the range of opportunities that exist for each parcel of land, as well as what expectations there may be on site. The ARP also highlights infrastructure investments that may be required as part of redevelopment. It is important to consult the ARP when considering purchasing, redeveloping or renovating properties to ensure the range of opportunities and expectations are known at the outset of a project.

Rezoning Applications

The ARP sets out a vision and opportunities that will guide future rezoning decisions. Applications to rezone land are processed by City Administration. After accepting a rezoning application in the ARP area, Administration will assess the application against the ARP policies and other relevant plans and policies, determine whether the application conforms to these policies, and indicate to Council whether or not Administration supports the application. The ARP will also be used to develop any Direct Control zones that may be applied for in the area to ensure the provisions meet the objectives of the ARP. The decision to rezone or not rezone is ultimately made by City Council at a publichearing.

At the City Council public hearing, members of the public may speak directly to Council about the rezoning application and indicate whether or not they support it. Council assesses each rezoning application on a case-by-case basis and maintains full jurisdiction and discretion over the ultimate decision.

The ARP should therefore be consulted by applicants prior to their application to rezone land, by Administration when assessing a rezoning application, and by interested members of the public.

Subdivision Applications

Subdivision Applications are made to the Subdivision Authority, which is composed of members of City Administration. Subdivision applications are considered against all relevant policies.

The ARP should be consulted by applicants, the Subdivision Authority, and interested members of the public when a subdivision application is made.

Development Permit Applications

Development Permit applications are processed and approved by City Administration. Administration assesses all development permit applications against the regulations of the Edmonton Zoning Bylaw and applicable statutory plans, such as an ARP.

The Jasper Place ARP provides direction to both applicants and Administration on development permit applications that involve the use of discretion, also known as Class B development. The ARP is applicable in the following instances:

- the development permit application is for a discretionary use
- the development permit will vary one or more Zoning Bylaw regulations
- the Zoning Bylaw regulations that apply to the proposed development are written such that they are open to interpretation

The ARP provides guidance on the appropriate contexts for and extents of variance or discretion, and provides guidance for areas of ambiguity.

Supporting innovation

Recognizing that there will be new ideas that are not anticipated by this ARP, when applications respond to and meet the vision and guiding principles of the plan, or offer a creative solution to a particular problem, efforts will be made to find ways to allow for their implementation.

City projects and investment

The Jasper Place ARP provides guidance to City staff who undertake capital projects in the area. The civic infrastructure policies highlight priority projects for Jasper Place and provide guidelines on how these should be implemented. All civic infrastructure recommendations made in the ARP are subject to Council prioritization and funding availability.

1.2.4 How to read this plan Structure

The Introduction provides an overview of the ARP process and the existing policy framework. It also summarizes the community input and technical studies that informed the ARP.

The Plan Vision sets out the overall vision for Jasper Place and shows how the City policy framework, community input and technical studies have come together to form a set of guiding principles that shape the ARP policies.

Objectives and Policies sets out land use and civic infrastructure maps and policies to help guide future land use decision making and City investment in Jasper Place. It provides information at a range of scales, including Jasper Place as a whole, each of the neighbourhoods, and a Stony Plain Road focus area.

Amendments + Monitoring provides a long-term plan for the ARP to ensure it remains up to date and is successfully implemented.

The Glossary provides definitions of key terms used in the ARP.

Readers

Achieving the vision of the ARP depends on a wide variety of stakeholders, and each stakeholder needs different types of information from the ARP to contribute to the success of the plan. Find out what sections may be most relevant to you.

Current and future residents The Plan Vision provides an overall vision and guiding principles for Jasper Place. The Objectives and Policies set out specific guidance on the type of buildings, parks and infrastructure that are envisioned for the area.

Homeowners, property owners and businesses The Objectives and Policies land use chapter sets out what opportunities may be available on your property. It provides direction for redeveloping your property under existing zoning and opportunities for rezoning. The civic infrastructure chapter also highlights potential infrastructure upgrades that may be needed to support redevelopment.

City staff reviewing rezoning or development applications The Objectives and Policies provides land use guidance for rezoning and discretionary development decisions. It also provides civic infrastructure policies that provide guidance on mobility or utility infrastructure requirements that may exist for individual applications. 3.2 Section Structure provides important information for interpreting the ARP policies and should be consulted by all City staff. The process for plan amendments is provided in the Amendments + Monitoring section.

City staff responsible for capital projects The Objectives and Policies civic infrastructure section sets out priority projects and guidelines to be considered in any related capital projects, subject to Council prioritization and approval of funding. 3.2 Section Structure provides important information for interpreting the ARP policies and should be consulted by all City staff. 1.3.3 Observations and technical studies provides information on the reports that should be consulted when undertaking related capital investment projects.

Institutional partners including school boards, emergency services, and utilities companies can find information about the future vision of the area in the Objectives and Policies section.

Mayor and Council The Plan Vision sets out the intent behind the ARP policies and the guiding principles these policies were based

The Way We Move (2009

the long-term vision for Edmonton's transportation network, The City's Transportation Master Plan, The Way We Move, identifies including the extension of the LRT network throughout the city

In 2012, Council approved the alignment of the LRT Valley Line, which will run from Mill Woods, through downtown to West Edmonton Mall, ending at Lewis Farms. The proposed alignment has the Valley Line entering Jasper Place at Stony Plain Road and 149 Street, where it will continue west along Stony Plain Road to 156 Street before turning south along 156 Street. Three associated LRT stations will be located in Jasper Place at Stony Plain Road and 150 Street, Stony Plain Road and 156 Street, and 156 Street and 95

Transit Oriented Development Guidelines (2012

To support the long-term viability of the LRT and to achieve the City's vision for a more compact and liveable Edmonton, Council approved Transit Oriented Development Guidelines (*TOD Guidelines*) in 2012. The *TOD Guidelines* outline development potential for sites within 400m of LRT stations and transit centres, and identify a variety of LRT station types. The *Guidelines* also provide a framework for new plans being developed within 800m of future LRT stations and Transit Centres.

All three of the Jasper Place LRT stations are identified in the *TOD Guidelines* as Neighbourhood Stations. Areas around the existing transit centre and future stations are identified for a range of infill development, primarily row houses and duplex housing, as well as apartment housing up to four storeys along arterial and collector roadways and large sites. Retail, restaurants, and professional offices are also encouraged within 200-400m of Neighbourhood Stations. Creating pedestrian and cycle friendly streets, parks and open spaces in stations areas are also key elements of the *TOD Guidelines*.

Residential Infill Guidelines (2009)

In 2009 Council adopted the *Residential Infill Guidelines* (RIGs) in order to provide guidance for residential development in Edmonton's mature neighbourhoods that fall outside of TOD areas, including portions of the four Jasper Place neighbourhoods. The goals of the RIGs are to:

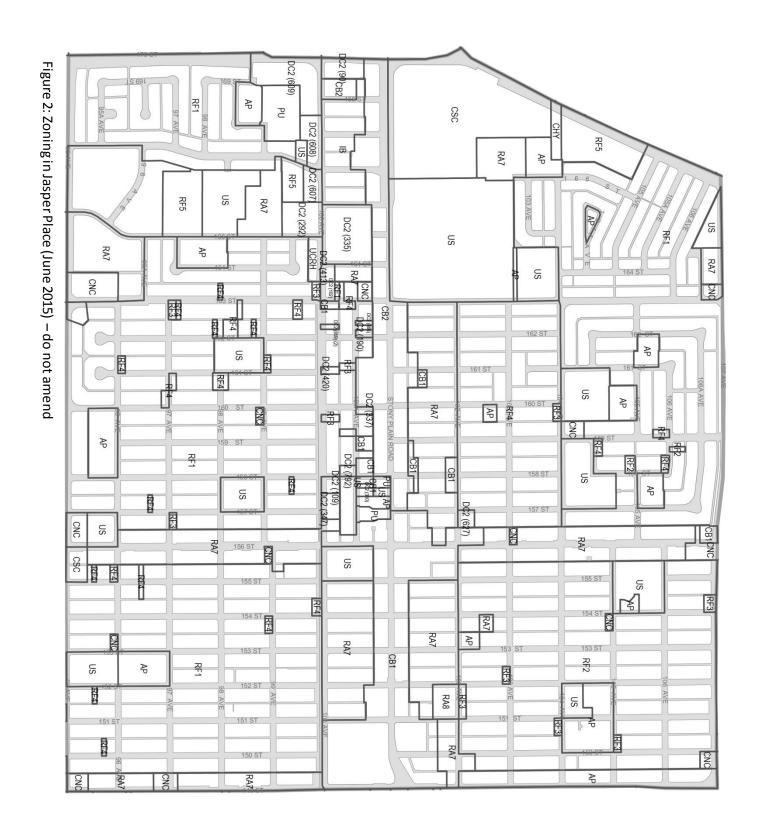

- Foster residential infill that contributes to ongoing neighbourhood renewal and revitalization, and support liveable and adaptable mature neighbourhoods
- Encourage residential infill that contributes to the social, economic and environmental sustainability of mature neighbourhoods and the overall sustainability of the City
- Provide direction on the built form and design of buildings as well as overall site design and streetscape interface for infill projects.

Zoning

The Zoning Bylaw controls the use and development of all land in the City of Edmonton. Each parcel of land in Edmonton is designated by a specific zone. Each zone sets out the permitted and discretionary use opportunities and development regulations for a range of development features, including such things as height, size, and setting of buildings as well as access, parking and landscaping.

The Zoning Bylaw includes both standard zones that are applied to multiple sites across the city, and Direct Control zones that are generally applied to individual properties or focused areas of Edmonton. The Zoning Bylaw also includes overlays that provide area specific regulations for portions of the city.

The map on the following page shows the zoning in place in Jasper Place at the time of passing the ARP in 2015. The neighbourhoods also fall within the Mature Neighbourhood Overlay (MNO). The purpose of this overlay is to ensure that low density development in Edmonton's mature residential neighbourhoods is sensitive in scale to existing development and provides opportunity for discussion between applicants for new development and existing community members.

1.3.1.2 Existing local plans, studies & resolutions

Stony Plain Road Urban Design Vision

Throughout the Revitalization process in Jasper Place, the City held a number of charrettes, working sessions, interviews and open houses that asked local stakeholders about their aspirations for the future of Stony Plain Road.

The Urban Design Vision was completed in June 2012 and provided guidance on the future character, land use and urban design considerations for the Stony Plain Road corridor. The Vision was used to inform policies in the Stony Plain Road focus area.

100 Avenue Planning Study

The 100 Avenue Planning Study covers the area from 149 Street to 170 Street between 99 Avenue and Stony Plain Road and was approved by Council in 1986. It set out land use directions for the area, including areas for single and two family residential, multi-unit housing, as well as commercial and mixed use.

Britannia / Youngstown Neighbourhood Planning Study

The Britannia / Youngstown Neighbourhood Planning Study was undertaken in 1983. The study made a number of recommendations, including maintaining apartment development to areas currently zoned RA7, the maintenance of single family houses in the northern portion of the neighbourhood, the rezoning of the southern portion to accommodate RF4 zoning, the use of a vacant site for the expansion of the Westlawn cemetery, and the retention of the 160 Street Park.

Canora Neighbourhood Improvement Plan

The Canora Neighbourhood Improvement Plan was undertaken in 1972. It set out a variety of land use recommendations aimed at balancing new and existing development. The Plan also made recommendations for road closures and new park space.

Newman's Resolution

Council passed the following resolution, which is referred to as the Newman's Resolution, on September 9, 1980:

"Whereas the large majority of home owners have previously expressed a strong desire to remain single family area, therefore, I move that the area from the lane west of 149 Street to the lane east of 156 Street between 95 Avenue and 100 Avenue remain RF-1, which is the equivalent zoning of what presently exists in the area."

1.3.1.3 How does the ARP relate to existing policies?

In addition to the ARP, future developments in Jasper Place will be guided by all applicable City-wide policies, including the Municipal Development Plan (MDP), Residential Infill Guidelines and Transit Oriented Development Guidelines. The ARP has been developed to be consistent with the general intent of these City-wide policies. In instances where detailed guidelines differ between the Residential Infill Guidelines (2009), Transit Oriented Development (TOD) Guidelines (2012) and the Jasper Place ARP, the ARP will take precedence. As Edmonton's policy framework continues to evolve, changes to the MDP, Residential Infill Guidelines (2009), and TOD Guidelines (2012) may occur. These amended policies, as well as new policies or initiatives, may be used to guide future amendments to the Jasper Place ARP to ensure it continues to evolve in accordance with the broader City policy framework.

The Zoning Bylaw is a living document and the Jasper Place ARP is designed to evolve in step with amendments to the Zoning Bylaw. References to the Zoning Bylaw in the ARP should be interpreted in relation to the contemporary Zoning Bylaw regulations, rather than the Zoning Bylaw in place at the time of adoption of the ARP. The regulations of the Zoning Bylaw take precedence over the ARP for Class A developments where no variances or discretion are applied.

The existing local plans and resolutions provide area and site specific guidelines that are comparable to the level of detail provided in the ARP. In order to avoid conflicting land use direction at the local level, these existing neighbourhood plans and policies, specifically the Stony Plain Road Urban Design Vision, 100 Avenue Planning Study, Britannia / Youngstown Neighbourhood Planning Study, Canora Neighbourhood Improvement Plan, and the Newman's Resolution, will no longer be in effect following the adoption of the ARP. This approach will encourage greater certainty and clarity in the decision making process.

1.3.2 Community input

1.3.2.1 Process summary

The City of Edmonton is committed to engaging citizens in decisions that could affect them, as set out in Policy C513: Public Involvement. As such, the City organized a number of activities throughout the ARP process for community members to provide their input on the ARP.

Open House #1, held in October 2012, was an opportunity for residents and stakeholders in all four Jasper Place neighbourhoods to learn about the ARP process, ask questions of City staff, and to clarify community priorities for the ARP.

In April and May 2013, the City visited each neighbourhood and met with the Stony Plain Road and Area Business Revitalization Zone in a series of Information & Feedback Sessions. The purpose of these sessions was to share preliminary information collected in the first phase of the ARP process, and to receive more detailed feedback about key issues identified by community members in Open House #1, such as neighbourhood character, housing choice, and parks and open space. Staff used this feedback, along with City-wide policy, to write a series of draft principles for the ARP.

At **Open House #2** in June 2013, the City presented a series of draft guiding principles based on the feedback received from the community. Attendees had the opportunity to review and comment on the principles, and identify areas of future change they anticipated in their neighbourhoods.

Throughout summer 2013, the City attended a variety of **community events** to increase awareness of the ARP process, and provide further opportunities for community members to give their feedback about the draft principles for the ARP.

At **Open House #3** in November 2013, community members shared their ideas about how to implement the guiding principles of the ARP in the Jasper Place neighbourhoods. Participants provided input through comment sheets, interactive displays, conversations with City staff, and workshop exercises about land use, parks and open space, and mobility. City staff used this feedback to inform the draft ARP.

Open House #4. Attendees had the opportunity to review display board materials, listen to a presentation by City staff that outlined the key policies and approaches of the ARP, and ask questions in large and small group formats. The first draft of the ARP was then open for community input until October 31, 2014 through email, letters, on-line surveys, and at a drop in session in September 2014.

A second draft of the ARP was released in February 2015, along with a summary document that responded to the community feedback received on the first draft. **Open House #5** was held in March 2015 to share information and discuss the second draft of the ARP. Information boards were provided and City staff delivered a presentation outlining the second draft and next steps in the process. Community members had the opportunity to provide their input on comment sheets at the open house, through an online survey, and by email and phone calls by March 31, 2015.

Community members also had the opportunity to attend an Executive Committee meeting on May 5, 2015 and share their perspectives on the second draft with members of Council.

The input of the community has been essential in identifying the plan priorities and has directly informed the guiding principles and specific policies in the ARP. The City gratefully acknowledges the time dedicated and commitment shown by community members in providing their input and feedback.

1.3.2.2 Key consultation themes

A number of key themes emerged through the feedback received from residents, businesses and property owners in Jasper Place. The topics that relate directly to land use and civic infrastructure that could be considered in the ARP are highlighted below.

Safety

 Feeling safe in the neighbourhood was highlighted as a key priority, particularly in parks and along Stony Plain Road.

Housing choices

- There was general consensus that Jasper Place should provide housing opportunities for families, singles, and seniors.
- Some felt that single detached housing should be protected and that other types of housing detracted from neighbourhood character.
- Others highlighted opportunities for a variety of housing forms to attract families and support local schools.
- Many expressed a desire for the interior of the neighbourhoods to remain small scale with additional opportunities focused along arterial roads.

Design quality & sense of place

- Many expressed support for infill if it could be guaranteed to be of high design quality.
- Many valued the sense of space created by front yards and mature trees in their neighbourhoods.

 Rear garages were noted as a defining feature of the
- Rear garages were noted as a defining feature of the neighbourhoods.
- Some felt there were opportunities to redevelop older houses into more modern, higher quality buildings.

Transit oriented development (TOD)

- Some felt transit oriented development guidelines were out of scale for the Jasper Place neighbourhoods and applied to too much of the area.
- Others felt TOD offered a good opportunity to provide activity and add to street life.

Stony Plain Road

- The Stony Plain Road commercial corridor was highlighted as a potential community asset that would be key to the success of the area.
- Concerns around the quality of buildings along Stony Plain Road were raised and a desire for more diversity of businesses was expressed.
- Mixed use development along the street was highlighted for its potential to revitalize the street.

Parks and open space

- Parks and open space in Jasper Place are highly valued by community members.
- Some noted that existing parks would benefit from upgrading to improve the quality and safety of the spaces.
- The need for more parks and open spaces was highlighted by West Jasper Place residents.

Mobility

- The walkability of the neighbourhoods was highlighted as a valued asset.
- Limited pedestrian access to key commercial areas, including Mayfield Common and Stony Plain Road, was raised as an issue.
- The 100 Avenue shared-use path was noted as a valuable community asset.
- It was noted that biking infrastructure could be improved to link across the whole area.
- Increased pressures on on-street parking were highlighted as a key concern associated with infill development.
- Concerns about the impact of LRT on traffic and transit users parking in the neighbourhoods were also raised.
- A strong preference for an off-street transit centre adjacent to the future LRT station was expressed.

Infrastructure

 Many expressed the importance of ensuring adequate sewer and utility infrastructure to support the local community now and in the future.

1.3.3 Observations and technical studies

The City undertook a number of technical studies that provide a picture of the existing conditions in Jasper Place. This section includes a summary of:

- Learning Scenarios
- Housing Assessment
- Utilities and Sewer Infrastructure Study
- Parks Assessment
- Mobility and Transportation Assessment
- Central Jasper Place Land Use and Transit Study
- High-level Historic Character Area Review

Many of the detailed findings of the technical studies have been incorporated directly into the civic infrastructure chapter of the Objectives and Policies section. The full reports are saved in the project file and should be referenced by City staff when undertaking related projects in the future.

Learning Scenarios

Many important questions were raised by residents and stakeholders in Jasper Place about what redevelopment might mean for their neighbourhoods. The Learning Scenarios were a tool used to help determine the potential impacts and outcomes of different types of redevelopment in Jasper Place, particularly in regard to people and families, housing choices, local businesses, transportation and accessibility, parks and open spaces, and walkability.

The City hired consultants to build a computer model that tracked changes to characteristics of the four Jasper Place neighbourhoods under three hypothetical redevelopment scenarios including:

- Existing land use opportunities with no changes proposed
- Moderate increases in redevelopment opportunities aligned with existing policies and current trends
- Major changes with significantly increased opportunities for redevelopment

Each scenario considered both a low and high uptake of the development opportunities to reflect the fact that different future market conditions may result in more or less redevelopment. In the low case, it was assumed that 5% of properties redeveloped to the full potential allowed under the scenario. In the high case, it was assumed that 30% of properties redeveloped.

The Learning Scenarios were undertaken with the input of a group of community volunteers from the Jasper Place neighbourhoods, including individual residents and business owners, as well as representatives from non-profit organizations, Community Leagues and the Revitalization Steering Committee. Their input helped ensure that the scenarios captured issues important to the community, that the findings were consistent and that the process was clearly communicated.

Through tracking and comparing the changes seen in the model, a number of key insights were gained:

- There is significant unused development capacity provided in the existing zoning, particularly in commercial areas.
- The ARP can create opportunities for redevelopment in policy, but if private land owners choose not to redevelop their properties, not much will change in neighbourhood outcomes.
- Providing new housing units through apartment development alone will not increase housing choice.
- Land uses that promote vibrant local businesses need to consider both the supply of commercial space and the number of local residents available to support businesses.
- Jasper Place is currently very walkable due to the existing street network and mix of land uses.
- The location of new housing should consider proximity to key community amenities like parks, open space and transit.
- The open space needs of the population will need to be met now and in the future.
- Parking may need to be managed to address increased pressure as population and businesses in the area increase.

Housing Assessment

In order to better understand the current housing conditions in the neighbourhoods, the City's Real Estate, Housing and Economic Sustainability Branch appointed an external consultant to undertake a Housing Assessment in Jasper Place. The purpose of the Housing Assessment was to:

- Develop a descriptive inventory of housing in Jasper Place's four neighbourhoods and a statistical baseline of existing housing conditions
- Identify initial issues and concerns of Jasper Place's residents, businesses, real estate professionals, and other community stakeholders related to housing

A cross tabulation of census data was also undertaken to provide key insights into Jasper Place demographics including:

- Household composition
- What types of housing individuals and families live in
- What types of housing seniors live in

The Housing Assessment provided a range of statistics that were incorporated into the Learning Scenarios, and informed the guiding principles and policies of the ARP.

Utilities and Sewer Infrastructure Study

This study examined whether existing infrastructure in Jasper Place could accommodate additional development, people and businesses in the neighbourhood. The study considered both sanitary and storm water systems, as well as utilities such as water, gas, electricity and phone lines.

The study used the population and development projections from the highest hypothetical redevelopment case considered in the Learning Scenarios to understand if the existing infrastructure could perform at a high level of redevelopment intensity. Although it is unlikely that this level of redevelopment will occur over the next 15-20 years, this high hypothetical scenario was chosen to provide an upper-most limit to ensure lower, more likely levels of redevelopment could be accommodated.

The study demonstrated that there is currently adequate capacity in the sanitary system to accommodate redevelopment in the future.

The study also found that the existing storm water system does not fully meet current 1:5 year storm event requirements, which is typical of Edmonton's mature neighbourhoods. The study noted that redevelopment is unlikely to significantly increase this problem. Since most of the area is already developed, there would not be a major change in the amount of permeable surface in the area with new development and therefore little change to the storm water drainage patterns. The study did highlight the opportunity to incorporate Low Impact Development (LID) measures on redevelopment sites and within the public realm to improve the baseline performance of the neighbourhood.

A review by EPCOR also assessed which upgrades to the water distribution system may be needed with future redevelopment. The study used the high hypothetical learning scenario projections to assess fire flow standards against current and potential future zoning requirements. Some areas were identified for upgrades or new infrastructure.

Overall, these studies found that the existing infrastructure is not a constraint for future redevelopment and that there is potential for building and site design in redeveloped areas to improve the existing storm water management system.

The study identified a number of key upgrades that could be made to improve performance of the utilities system in Jasper Place and may be required at the time of redevelopment. These findings and recommendations are found in the Objectives and Policies section.

Parks assessment

The City's Parks Land Planning Unit undertook an analysis of existing parks and open space in the four Jasper Place neighbourhoods. Following current practice for mature neighbourhoods, three key indicators derived from the Urban Parks Management Plan were used to assess the provision of existing park space, including:

- Park space per population and area
- Distance and access to park space
- Type and diversity of park space

The indicators were adapted to reflect the character of the four neighbourhoods. The findings of this study are included on existing civic infrastructure pages in the Objectives and Policies section.

Mobility and Transportation assessment

The City hired consultants to review the existing mobility conditions of Jasper Place for all modes including walking, cycling, public transit, goods movement and vehicular traffic, as well as on-street parking. The purpose of the study was to understand current mobility conditions in the area, and to identify any transportation changes that may be required as a result of potential future redevelopment.

The study found that Jasper Place already has a strong multi-modal transportation network that will be further improved when the Valley Line LRT is constructed in the area. The study also found that while the LRT is likely to increase traffic congestion in the area, redevelopment anticipated as part of the ARP is not expected to significantly worsen the situation. The study noted the opportunity to address traffic congestion by encouraging a shift to other modes of travel and made a series of recommendations that have been incorporated into the ARP civic infrastructure policies.

Central Jasper Place Land Use and Transit Study

Sustainable Development and Edmonton Transit Services (ETS) undertook a joint project to consider how the future LRT station at 156 Street and Stony Plain Road could be integrated with the existing transit centre. A consultant group was asked to develop a number of options, and evaluate these against key evaluation measures, including:

- Put People First
- Safe, Efficient and Reliable Transit Operations
- Make this a Great Urban Place
- Ensure Value for Public Funds
- Ensure a Phased Approach

The final report sets out the process undertaken including internal discussions and public surveys. The report provides a range of options to be considered as the detailed design of the Valley Line LRT moves forward in the future. The report informed a number of key ARP policies that should be considered as the detailed design of this work takes place in conjunction with the delivery of the Valley Line LRT.

High-level historic character area review

The City's Heritage team undertook a high-level review of Jasper Place to identify areas in the neighbourhoods where original street character was still evident. The assessment looked for areas where elements such as original dwellings, lot siting and street cross-sections were still intact along a block face.

A number of areas were identified in Jasper Place and are shown on the proposed land use concepts maps contained in the Objectives and Policies section. The review also recommended that a Historic Resources Inventory covering all four neighbourhoods be completed in the future in order to aid in the specific identification of heritage character areas and individual historic buildings in Jasper Place.

VISION & PRINCIPLES

2. Plan Vision

2.1 Vision

The ARP supports enhancing Stony Plain Road to become a vibrant and well-used commercial street through pedestrian-oriented mixed use development that will enhance the attractiveness of the urban realm and provide increased population to support local businesses.

The ARP encourages incremental change to accommodate a variety of housing types in order to increase available housing choices for all. Enhanced opportunities for residential infill are focused around transit, services and amenities.

The ARP promotes improved attractiveness and safety by activating neighbourhood edges, street frontages, and areas adjacent to the public realm such as properties bordering parks.

The ARP supports enhanced connectivity and walkability through guidance for existing pedestrian and cycling facilities, and by highlighting opportunities for a more continuous network within and beyond the Plan area.

The ARP supports neighbourhood livability through investment in parks, amenities and infrastructure.

2.2 Guiding principles

The Guiding Principles are the foundation for the overall plan vision and structure

Housing choices promote vibrant and diverse communities that provide housing opportunities for all individuals and families

have a range of housing choices to meet diverse needs and create more socially sustainable singles, couples and seniors. This also aligns with the City's objectives to ensure neighbourhoods communities (The Way We Grow 4.4). Evidence from the Learning Scenarios showed that there are few housing choices other than apartments or single detached dwellings in Jasper Place. This principle responds to community desire for the neighbourhoods to accommodate families,

Neighbourhood character is enhanced through

A mix of uses are provided near transit, and these buildings are scaled to transition into the neighbourhoods

This principle reflects community feedback that new development should complement existing neighbourhood character and provide transitions in scale. It also echoes City-wide policy to promote medium and higher density residential and employment growth around LRT stations and transit centres (The Way We Grow 3.3.1.1).

promote and improve safety

high quality development that responds to the local context

Buildings and open spaces are designed to

This principle reflects community feedback and City policy (The Way We Grow 5.2) that new development should be safe, attractive, and sensitive to existing neighbourhood character.

Stony Plain Road is a vibrant, well-used shopping street with a mix of businesses to serve the local communities

This principle is informed by community concerns about neighbourhood safety, and City-wide policy to ensure that public spaces and the buildings that frame them are inviting and safe (The Way We Grow 5.6.1).

This principle reflects community aspirations for the Stony Plain Road commercial corridor, and

Jasper Place is safe and easy to get around, walkability is supported and parking is proactively managed

This principle is informed by community feedback that existing walkability should be maintained, streets should be welcoming to pedestrians, and future parking needs addressed proactively. These goals align with City-wide objectives to enhance walkability through good urban design (The Way We Grow 5.2.1.6, 5.6, 5.7). Findings from the Learning Scenarios indicated that Jasper Place currently enjoys a high level of walkability.

City objectives to support mixed use, transit supportive and walkable urban areas. (The Way We Grow 5.2.1.6). Findings from the Learning Scenarios showed that there is an abundance of commercial space beyond what can be supported by the local population and that additional

population in the neighbourhood could help strike a healthier balance

and enhance neighbourhood character

Parks and open spaces meet the needs of residents, contribute to the sense of community

Adequate servicing infrastructure is provided to accommodate the cumulative outcomes of redevelopment

addressed as redevelopment in mature neighbourhoods occurs (The Way We Grow 3.5.1.7). infrastructure. It also reflects City-wide policy to ensure any infrastructure constraints are Technical studies found some existing constraints with infrastructure capacity that in some This principle is informed by community input around the importance of adequate

and open space is lower in some neighbourhoods within Jasper Place.

City-wide policy to serve Edmontonians with accessible and inclusive parks and open spaces (The Way We Grow 4.3.1). A parks assessment also found that the quantity and variety of parks

recreation and social needs, as well as contributing to neighbourhood character. It also reflects

cases could be improved with redevelopment and in other cases may exacerbate problems.

19

3. Objectives and policies

3.1 Strategic Approach

The Jasper Place ARP facilitates strategic land use change over the medium range time frame of 15-20 years. The ARP sets out a range of opportunities for growth and change but recognizes that full redevelopment of the area is unlikely in this time frame. In order to ensure realistic expectations and appropriate infrastructure planning, the ARP assumes a maximum redevelopment rate of 30% of existing properties, based on market and redevelopment trends throughout Edmonton and Jasper Place.

A number of opportunities are concentrated on Stony Plain Road to establish a community focal point and to generate a catalyst for positive change. As the vision for a vibrant Stony Plain Road is achieved moving forward, consideration for additional opportunities in other portions of the plan area, such as 156 Street, could be considered.

The ARP does not set out City-initiated rezonings for properties in Jasper Place. The ARP instead provides guidance on future rezoning and redevelopment decisions. This approach is intended to avoid contributing to existing patterns of development in Jasper Place where many properties are currently not developed to the full allowance permitted under existing zoning. Higher zoning can result in disinvestment as landowners wait to maximize development potential, or can cause land prices to become too high for small scale infill. There are also a variety of zones that can be used to meet the objectives of the ARP and it is not always possible for pre-emptive zoning to anticipate exact market requirements.

Similarly, the Jasper Place ARP provides guidance on the type and scale of buildings in different areas, but it does not refer to specific zones. This is because there are a number of zones that may meet the objectives of the ARP, and because the Zoning Bylaw is a living document and may change over the time period of the ARP. In the past, there have been instances where an ARP refers to a zone that has

changed or is no longer in existence, making it difficult to understand the original intent of the ARP.

By providing clear guidance on the objectives of each land use area and the range of building types, instead of referring to specific zones, the ARP provides robust and long-lasting direction for the area even if the Zoning Bylaw changes over time. This approach also allows the neighbourhoods to evolve in step with other City-wide initiatives undertaken in the Zoning Bylaw.

The level of opportunity provided in the Jasper Place ARP has been considered in the wider City context. The ARP supports redevelopment that both contributes to the success of Jasper Place and aims to compliment, rather than compete with, other development opportunity areas within Edmonton, such as Blatchford, Downtown, and other TOD areas.

3.2 Section structure

Jasper Place is made up of four unique neighbourhoods, each with separate histories and current conditions. The Jasper Place neighbourhoods also share common features, including the Stony Plain Road commercial corridor, parks and open spaces, mobility networks and utility infrastructure.

In order to reflect the individual characteristics of each neighbourhood while also addressing their shared features, the information in the Objectives and Policies section is presented at three scales:

- Jasper Place as a whole
- Each of the four neighbourhoods individually
- Stony Plain Road focus area.

The ARP's Objectives and Policies are set out in two chapters: land use and civic infrastructure.

Land use chapter

This chapter relates to the buildings and functions contained within individual parcels of land. In general, these properties are owned by private citizens or businesses. The land use policies provide important information for those looking to: purchase, redevelop or renovate properties in Jasper Place; apply for a rezoning, including Direct Control zones; those undertaking discretionary development in Jasper Place; and City staff responsible for reviewing these applications.

The land use chapter provides the following information for each of the three geographic scales:

- A map and written analysis of current land use conditions
- A proposed land use map showing the overall concept
- A detailed land use policy table

The land use policy tables include three columns for each of the land use areas identified on the maps:

- The Purpose of the land use area
- The Supported built form and locations for different building
- The Key policies that guide building and site design features

Policies should be referenced by the neighbourhood code and number in the coloured heading for each policy table, followed by a period and the specific policy number. For example, SPR1.1.

Interpretation

The list of 'Supported built form' provided under the land use area may be permitted or discretionary uses in a variety of zones. When determining the appropriate zones to apply, the purpose of the land use area will be considered against the stated purpose of the zone to ensure consistency and alignment.

In instances where a built form is followed by "in locations specified by the Zoning Bylaw," this is to be interpreted to mean that if a permitted or discretionary use meets the location regulations of the existing zoning on site, the ARP would support the building type.

Land use policies are generally focused on the built form of new development. Residential-Related Use Classes and Community, Educational, Recreational and Cultural Service Use Classes are supported throughout Jasper Place, provided they are in scale with the relevant land use area, and that any anticipated traffic, noise, or nuisance impacts can be effectively mitigated.

When the land use policies use 'shall,' this means that the policy is expected to be followed, with the possibility of exceptions due to valid planning principles or demonstrable hardship.

Civic infrastructure chapter

This chapter refers to the roads, utilities, parks and open spaces that are part of each neighbourhood. In general, these are owned and controlled by the City of Edmonton or other civic partners such as school boards and utilities companies. The civic infrastructure policies should be referenced to inform City projects and investment.

For each geographic scale in the civic infrastructure chapter, there is:

- A map and written analysis of existing civic infrastructure
- A map of the proposed civic infrastructure investments

Due to the shared nature of these civic infrastructure elements, the civic infrastructure policies are contained in a single policy table for the whole of Jasper Place. Civic infrastructure policies have been divided into four categories:

- Parks and open space
- Mobility
- Infrastructure
- Historic resources

The civic infrastructure policy table includes three main components:

- The overall purpose of each policy category
- The key policies that guide investment in civic infrastructure
- The implementation resources and links to other City initiatives that support delivery of the policies

Policies should be referenced by the category code and number in the coloured heading for each policy table, followed by a period and the specific policy number. For example, PO1.1.

Interpretation

It is important to note that all civic infrastructure recommendations made in the ARP are subject to Council prioritization and funding availability. The civic infrastructure policies are also long-term objectives to be implemented over the full period of the ARP, which is 15 to 20 years. When the civic infrastructure policies use 'should,' this means that the policy is expected to be followed, with the possibility of exceptions due to a valid planning principle, or circumstances unique to a specific project.

Linkages between land use and civic infrastructure

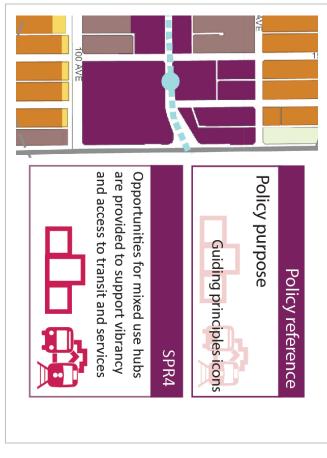

The land use policies are intended to provide guidance to property owners and City staff when considering a site specific application for rezoning or redevelopment. However there are instances where a property may have a related civic infrastructure policy that will need to be taken into consideration. Examples include requirements for walkways, re-establishing laneways or making utility upgrades.

All applicants and City staff are encouraged to review both the land use and civic infrastructure policies in order to ensure all requirements of a development are being met.

EPCOR Water advises that water distribution infrastructure may need to be upgraded in order to support developments within some areas contained within the Jasper Place ARP. These upgrades may include the installation or relocation of fire hydrants, the installation or replacement of water distribution mains, and the abandonment or installation of services. In keeping with EPCOR policy, and as per City of Edmonton Waterworks Bylaw Number 12585, the applicant/owner will be responsible for all costs associated with providing City standards of water supply, including any changes to the existing water infrastructure required by these proposals. All construction must adhere to the most recent version of the City of Edmonton's Design and Construction Standards at the time of construction. EPCOR Water should be contacted in the planning stages of each proposed development to determine what improvements will be required.

Civic infrastructure policy tables

Parks and open space

Purpose: To enhance existing parks and open spaces and provide a greater variety of parks and open spaces in Jasper Place.

Key policies

- The City should acquire any available private or public school sites in Jasper Place for park use in the future, prioritizing neighbourhoods where the majority of park space is contained within school sites.
 Opportunities to provide additional open spaces and plazas in road
- 2. Opportunities to provide additional open spaces and plazas in road rights of way, particularly in side streets adjacent to Stony Plain Road, should be explored in relation to M2.2.
- 3. Enhancements to Butler Memorial Park should be considered.
- 4. Urban plazas should be provided adjacent to future LRT stations to integrate the platforms with the surrounding area. A town centre plaza space should be incorporated as part the future LRT station at 156 Street and Stony Plain Road.
- 5. Based on the findings of the parks assessment, the City should explore opportunities in conjunction with the community to acquire land to accommodate a passive recreation space in West Jasper Place north of 98 Avenue and south of 100 Avenue. At the time of assembly, a design process should be undertaken with community members to assess how space can best meet the area's needs.
- 6. Opportunities to redesign the Canora Community League site to encourage better overlook should be explored.
- 7. The opportunity to upgrade the existing park in Britannia Youngstown on 160 Street south of 103 Avenue should be explored.

Implementation resources & links to other City initiatives

This is highlighted as a long term opportunity that will depend on school board decisions.

To be incorporated with ongoing streetscape improvements works through Community Services and Transportation Services.

To be coordinated through Community Services.

To be considered in the design update for the LRT Valley Line in conjunction with Policy M4.4, and coordinated with upgrades to the MacEwan facility after acquisition from the City.

The acquisition of parks land in West Jasper Place will align with the direction contained in the forthcoming Open Space Master Plan and will be acquired on an opportunity basis. The acquisition and subsequent development of the land should be coordinated between Sustainable Development and Community Services with community involvement, recognizing some matters of acquisition may require confidentiality.

Encourage the Community League to apply for funding from available City funds and programs.

Encourage the Community League to apply for funding from available City funds and programs.

13. Where appropriate, park or open space upgrades should explore

opportunities to include LID features.

requirements where appropriate.

Community Services to incorporate as part of capital funding source

8. Opportunities to enhance unused land associated with the curling club This is highlighted as a long term opportunity. Requests from the in Britannia Youngstown at 107 Avenue and Mayfield Road should be community and direction from Council would be needed to prioritize this
explored. project in the future.
 Redevelopment of the existing AP parcel owned by the City to connect the laneway at 102b Avenue to 163 Street should be considered in and Community Services to Coordinate with Edmonton Public School consultation with the Youngstown Elementary School. Boards through ELEVATE.
10. The parks parcels in Canora along 107 Avenue should be maintained as a green buffer for this neighbourhood edge. The use of a portion of transfer of any necessary portion of park parcels to provide a shared use path should be supported. path as part of any road upgrade works to 107 Avenue in conjunction with Policy M3.3.
11. Where appropriate, park or open space upgrades should include winter weather adaptations as set out in the Winter City Strategy and associated design guidelines, including consideration of wind protection and solar access. Community Services to incorporate as part of capital funding source requirements where appropriate.
12. Where appropriate, park or open space upgrades should incorporate Community Services to incorporate as part of capital funding source naturalized landscaping features to promote biodiversity and reduced requirements where appropriate. watering requirements.

Mobility 3

Purpose: To enhance and promote active modes of transportation and support neighbourhood connectivity for all users

Site specific policies

- Properties along the western edge of 149 Street between 102 Avenue and 100 Avenue should be required to provide an easement to accommodate a future shared-use path.
- Any large site redevelopments should incorporate street and laneway
 patterns that align with the existing grid. Particular attention should be paid
 to east/west connections across large residential sites in Britannia
 Youngstown and Glenwood, as well as redevelopment at Mayfield Common
 and Jasper Gates.
- 3. All service and parking access for multi-family, commercial and mixed use buildings should be provided from laneways. New mid-block vehicle access points should not be supported for the length of Stony Plain Road and existing mid-block access points should be closed where possible.
- The laneway north of Stony Plain Road in front of the Howard Johnson building between 156 Street and 155 Street should be re-established in conjunction with Policy SPR4.16.
- 5. The laneway north of Stony Plain Road between 157 Street and 158 Street should be re-established in conjunction with Policy SPR2.13. The existing midblock lane access could be closed in exchange for the laneway area.
- Transportation Impact Assessments should be provided as required by Transportation Services.

Stony Plain Road specific policies

- Opportunities to expand the streetscape improvement program along the full length of Stony Plain Road to create opportunities for new public spaces, plazas and patios, should be explored.
- 2. Opportunities to provide new open spaces in road right of way adjacent to Stony Plain Road should be considered in conjunction with Policy PO1.2.
- Opportunities for on-street car parking to support commercial uses should be provided wherever possible, particularly along side streets adjacent to Stony Plain Road and on Stony Plain road west of 156 Street.

Implementation resources & links to other City initiatives

<u>₹</u>

To be secured by Transportation Services and Sustainable Development as part of any rezoning or development application process.

To be considered by Transportation Services and Sustainable Development as part of any large site redevelopments in conjunction with BY4.11, G4.12, SPR3.10 and SPR4.17. Connections should be dedicated as road right of way through subdivision. In the absence of subdivision, a public access easement should be provided as part of the rezoning or development permit application process.

To be considered by Transportation Services and Sustainable Development as part of any redevelopment proposals, as well as in conjunction with Policies SPR3.1, SPR3.2, SPR3.3, SPR4.2, SPR4.3 and SPR4.4.

To be considered by Transportation Services and Sustainable Development as part of any redevelopments proposals related to the property.

To be considered by Transportation Services and Sustainable Development as part of any redevelopment proposals related to the property.

Transportation Services typically only require TIAs for larger developments, or ones that are expected to be significant traffic generators.

Implementation resources & links to other City initiatives M2

This is highlighted as a long-term opportunity. Funding and direction from Council would be needed to prioritize this project in the future.

Applications to close road right of ways to provide new open spaces should be supported.

To be considered by Transportation Services as part of any road upgrade works in conjunction with Policy M5.2.

	2	Mobility	A
	Ac	Active transportation and road upgrade related policies	Implementation resources & links to other City initiatives M3
	<u>+</u>	Complete Streets guidelines should be referenced for all road upgrade works focusing on mode priority and context sensitive design. Where a pedestrian priority area has been identified, particular consideration should be given to pedestrian realm elements such as treed boulevards.	Transportation Services to incorporate policy standards as part of any road upgrade works and reflect Policy M5.2 relating to on-street parking adjacent to Stony Plain Road.
	2.	The existing shared-use path on 100 Avenue should be maintained and extended from its current terminus at 163 Street westward to 170 Street.	Transportation Services to incorporate as part of any road upgrade works to 100 Avenue.
	ώ	A shared-use path should be provided along 107 Avenue, making use of adjacent park parcels on the south side of the street as needed to accommodate the path.	Transportation Services to incorporate as part of any road upgrade works to 107 Avenue in collaboration with Sustainable Development as set out in Policy PO1.10.
	4.	The opportunity to link the existing 100 Avenue and 149 Street shared-use paths between 102 Avenue and 100 Avenue should be explored, including upgrading the concrete slab portion at the east end of 100 Avenue to typical shared-use path materials.	Transportation Services to incorporate as part of any road upgrade works to 149 Street, including LRT construction, with necessary land secured as part of any rezoning or development application process on adjacent properties in conjunction with Policy SPR4.18.
101/10/	ب	Pedestrian crossings of 100 Avenue will be reviewed on an ongoing basis and upgraded as required to ensure safety and connectivity to the Stony Plain Road commercial area.	Transportation Services will monitor ongoing redevelopment and ensure that necessary upgrades to pedestrian crossings are provided as warranted.
	6.	Improved crossings of 149 Street to better connect with the river valley system should be explored.	Transportation Services will consider upgrades as part of road renewal works or in relation to LRT construction as per Policy M4.5.
	7.	The opportunity to provide sidewalks on both sides of 163 Street north of Stony Plain Road should be considered.	Transportation Services to incorporate as part of any road upgrade works to 163 Street.
	œ	Existing cut through paths should be maintained and opportunities to improve feeling of safety through lighting and overlook should be explored.	Upgrades to the cut through paths should be incorporated as part of any planned sidewalk upgrade programs.
	.9	The feasibility of creating a pedestrian connection to link 98 Ave between 162 Street and 163 Street and the potential to extend this linkage west to 164 Street to improve access to the Glenwood Community League Hall and park should be considered.	This is highlighted as a long term opportunity. Requests from the community and direction from Council would be required to prioritize this project in the future.
	10.	 New bike routes identified on the civic infrastructure map should be explored for feasibility. 	This is a long term action item to be considered as part of Transportation Service's Active Transportation program. Identified routes should be incorporated as part of roadway renewal as opportunities arise.

incorporated as part of roadway renewal as opportunities arise.

Transit related policies A new bus-to-bus and bus-to-LRT exchange will be designed as design should reference the Central Jasper Place Land Use and Transit Study update work on the LRT Valley Line advances. The future configuration (2014) and should: ensure safe and efficient transit operations and Valley Line proceed in conjunction with Policy SPR4.21. Services, and Transportation Services as the design update for LRT To be developed by Sustainable Development, Edmonton Transit Implementation resources & links to other City initiatives

If the existing transit centre is no longer required by Edmonton Transit for bus operations, the land should be redeveloped.

ensure adequate access to the MacEwan building.

transfers; accommodate a bus transfer facility adjacent to the LRT station; minimize conflicts between modes; prioritize pedestrian movements and safety; maximize transit-oriented development opportunities; provide a viable development parcel at the corner of Stony Plain Road and 156 Street; maintain continuous active frontage on Stony Plain Road and 156 Street to support the pedestrian-oriented shopping area; provide overlook and animation from adjacent development onto the transit facilities; and

- Minimum 4m sidewalks should be accommodated adjacent to the LRT along 156 Street and Stony Plain Road, in conjunction with Policies, WJP4.8, G4.8 and SPR4.8. Opportunities to reduce traffic lanes to accommodate expanded sidewalks should also be considered.
- 4. Urban plazas should be provided adjacent to future LRT stations to integrate the platforms with the surrounding area. A town centre plaza space should be incorporated as part the future LRT station at 156 Street and Stony Plain Road to create a link between the station and the MacEwan building.
- 5. The reconstruction of the intersection at 149 Street and Stony Plain Road should ensure direct pedestrian and bicycle connections to improve connectivity to the river valley system.
- Coordinate necessary utility infrastructure upgrades noted in Policy U1.1 and shown on the civic infrastructure map, particularly the trunk upgrades along Stony Plain Road.

To be redeveloped as set out in Policy SPR4.22

To be considered by Transportation Services in the design update for the LRT Valley Line with support from Sustainable Development.

To be considered by Transportation Services in the design update for the LRT Valley Line with support from Sustainable Development.

To be considered by Transportation Services in the design update for the LRT Valley Line with support from Sustainable Development in conjunction with Policy M3.4 and M3.6.

To be coordinated between Transportation Services and Financial Services and Utilities in the design update and phasing of the LRT Valley Line.

Parl	Parking related policies	Implementation resources & links to other City initiatives
브	A balance of on-street parking opportunities should be maintained in Jasper Place to accommodate local residential and commercial parking	To be initiated by residents and businesses as needed and coordinated through Transportation Services.
	through the use of a parking management program as the need arises, particularly in areas in proximity to future LRT stations.	
2.	Expanded on-street car parking facilities should be accommodated on the north-south streets between Stony Plain Road and the commercial because and along Stony Plain Boad wort of 156 Street	To be incorporated by Transportation Services as part of any road upgrade works in conjunction with Policy M2.3.
د		A++bo+ino of opportunities of +bo = 0.00 (b) = 0.00 (b) opportunities
μ	The provision of parking structures necessary to support Stony Plain Road should be considered. Any parking structures should provide active frontage along adjacent public streets and be constructed of high quality materials.	At the time of construction of the LRT Valley Line, the existing parkade at the MacEwan West building will be replaced. Transportation Services, Sustainable Development and Community Services should consider how the replacement parking facility can support Stony Plain Road as a whole.

Key policies 1. A Historic Resources Inventory to cover all of Jasper Place should be undertaken to aid in the specific identification of heritage character areas and individual heritage properties in the area.	Purpose: To maintain and enhance historic resources.	Historic resources	Low impact development features should be considered as part of City investments in the area.	Key policies 1. The feasibility of undertaking the storm water and water supply upgrades as identified in the technical studies should be explored.	Purpose: To encourage adequate utilities infrastructure now and in the future.	Utilities
Implementation resources & links to other City initiatives Sustainable Development should undertake this study.		HR1	To be incorporated by all Departments as part of any capital funding source requirements.	Implementation resources & links to other City initiatives Financial Services and Utilities to incorporate as part of on-going City-wide utilities and infrastructure planning and prioritization, and coordinate with Transportation Services during the delivery of the LRT Valley Line as noted in Policy M4.6. Applicants located near identified water upgrades should contact EPCOR Water as early as possible to understand potential necessary upgrades.		U1

4. Amendments + Monitoring

This ARP is intended to guide the redevelopment of Jasper Place over the next 15 to 20 years. While this document sets out a general direction and aspiration for the area, it will be important to ensure that the ARP can evolve dynamically in the coming years. The following section sets out how amendments should be undertaken and how the plan outcomes should be monitored.

4.1 Amendments

No plan can consider all future opportunities or contingencies, and as such, amendments in the future may be required. It is essential that all proposed amendments are assessed against the Guiding Principles.

Amendments may be triggered by a variety of situations, including:

- Applications for rezoning or redevelopment
- Changes or updates in City-wide policies and guidelines, including the Municipal Development Plan
- Changes in transit service provision, including bus route frequency and designated transit avenues
- Completion of a Historic Resources Inventory

Future amendments will generally fall into three categories:

Minor amendments

A minor amendment would be to make minor text revisions to update terminology, contextual information or accuracy. No consultation or notification is required.

Significant amendments

These types of amendments would change the area of applicability of different precincts. For example, if a property originally identified for small scale residential was proposed to be changed to active edge housing. In such an instance, notification would need to be made to the Community League and notices sent out to all properties within 60m of the property in question.

When considering such amendments, City staff should consider if the amendments are consistent with the Guiding Principles and if there have been any significant changes in conditions of the local area that would undermine the original rationale for precinct designations.

Major amendments

Major amendments would involve changing the fundamental elements of the plan including amendments to:

- The Guiding Principles
- Precinct purpose
- Precinct building type opportunities
- Land use or civic infrastructure policies

Such amendments would require full notification of all residents and property owners in the affected neighbourhood. An open house must also be held.

Any necessary supplementary parks and open space, mobility and infrastructure studies to support amendments should be undertaken as required.

It should be noted that any amendments to land use or civic infrastructure maps will need to be done on both the Jasper Place wide scale maps as well as the neighbourhood or Stony Plain Road focus area maps.

4.2 Monitoring

Both the land use and civic infrastructure policies are recommendations made on existing and anticipated conditions, however not all elements can be predicted. The implementation of the ARP should be monitored through the following indicators as well as others as appropriate:

- The number of permits granted in the area
- The proportion of those permits that did and did not require ARP amendments
- The number of civic infrastructure policies implemented

If these indicators suggest that the ARP is not providing adequate guidance, an update of the plan should be considered.

Updates may also be needed over time to ensure consistency with:

- New policy directions and Council priorities
- Changing road designations, transit service and traffic patterns

5. Glossary

Active frontage means there are windows and doors facing the sidewalk and that the uses encourage people to come and go, for example a retail store or restaurant.

Blank facades means that a side of a building has no windows or entrances on it, and is not used for public art such as murals or light installations.

Building articulation refers to features on a building that provide interest and reduce the massing and monotony of a long, continuous wall.

Civic infrastructure refers to the roads, utilities, parks and open spaces that are part of each neighbourhood. In general, these are owned and controlled by the City of Edmonton or other civic partners such as school boards and utilities companies.

Cut-through paths are pedestrian and cycle walkways that are typically located in the middle of a long block. They may cross a laneway but are not adjacent to any streets.

Discretionary development is development that requires a variance or is for a discretionary use. Approval of discretionary development is at the Development Officer's sole discretion.

Direct Control Zoning includes Site Specific Development Control Provision (DC2) and Direct Development Control Provision (DC1)

Flanking is the longest side of the property, usually the side of a building.

Flanking public realm is where the long side of property is next to a laneway, street, park or open space. As there are no adjacent neighbours that could be impacted by a reduced setback on this side, reduced setbacks are considered acceptable in these locations.

Fronting is the direction where the front of the property is facing. The front of a property is defined in Edmonton's Zoning Bylaw.

Ground oriented housing are buildings that provide direct street access for each ground floor housing unit. Single detached, semidetached and row housing are typically ground oriented. Apartment buildings can also be ground-oriented by providing individual entrances for all ground floor units.

Housing type diversity refers to the mix of housing structures in the area. This includes how many types of residential units there are, including single family houses, secondary suites, garage and garden suites, duplexes, semi-detached, row houses, stacked row houses, and low and high rise apartment buildings.

Land use describes what is located on a property, for example a building or a park. Land use considers broad categories of use, for example residential uses or commercial uses.

Land use areas are defined in the land use policy section, and include Small Scale Housing, Active Edge Housing, Transit Oriented Housing, Multi-family housing, Commercial and Mixed use areas.

LID (Low Impact Development) is an approach to building and landscape design that aims to manage storm water more sustainably, for example rain barrels, green roofs, or bioswales.

Linear transparency is a measure of how many doors and windows are provided along a building façade. It is measured by taking the width of each door and window along a building frontage and comparing this to the total length of the frontage. In residential buildings, linear transparency is measured at 1.5m above the building's first finished-floor height, and in commercial buildings, linear transparency is measured 1.5m above the finished grade of the adjacent public walkway. See figure 29 on following page.

Location criteria are used in the Zoning Bylaw to direct where different buildings types might be located in a zone. For example, a zone might specify certain buildings be located on corner lots or adjacent to commercial properties.

Open spaces refers to recreation or leisure areas that are publically accessible but are not like typical parks. Examples would include plazas, or the storm drainage area next to Jack Horan Park.

Overlook means that there are windows and doors facing onto a space, allowing people to observe an area. This type of "eyes on the street" or passive surveillance is an important element in creating safe spaces.

Permitted development is development that is allowed as-of-right under the allowances of the Zoning Bylaw. If a permitted use complies with all of the regulations of a zone and all other relevant Zoning Bylaw regulations, the Development Officer must issue a Development Permit for that use.

Public realm is defined in this plan as any space that is not privately owned property, including streets, laneways, pedestrian cut-through paths, shared-use paths, and parks and open space.

Setback is the distance between the property line and the building

Shared-use path is typically a paved pathway that can accommodate a variety of non-motorized users including pedestrians and cyclists. In Edmonton, these are typically tarmac pathways with a yellow dividing line.

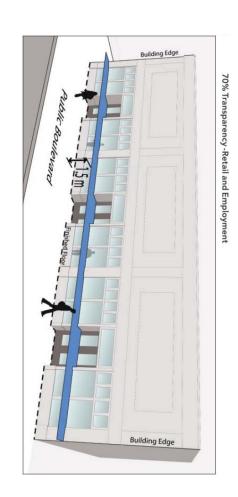

Street fronting means that a building is set towards the front of the property and does not have parking in the front.

Utility open space refers to green areas that have some characteristics of a park, but have a primary storm water management space. Park uses, such as seating or play equipment, are more limited in these spaces.

Variance is when one or more of the regulations of the Zoning Bylaw are not precisely met in a development permit.

Zero lot line is when a building is constructed to the edge of the side property line with no setback. This allows adjacent development to be built immediately next to the building with no gaps.

Zoning provides details on land use and identifies the specific permitted and discretionary uses allowed under that zone. It provides regulations regarding the type, size and location of buildings on properties. Zoning in Edmonton is regulated by the Zoning Bylaw 12800.

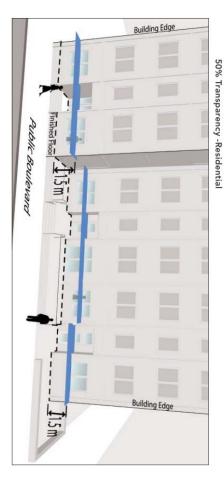

Figure 29: Measuring linear transparency
