Dashboard Summary

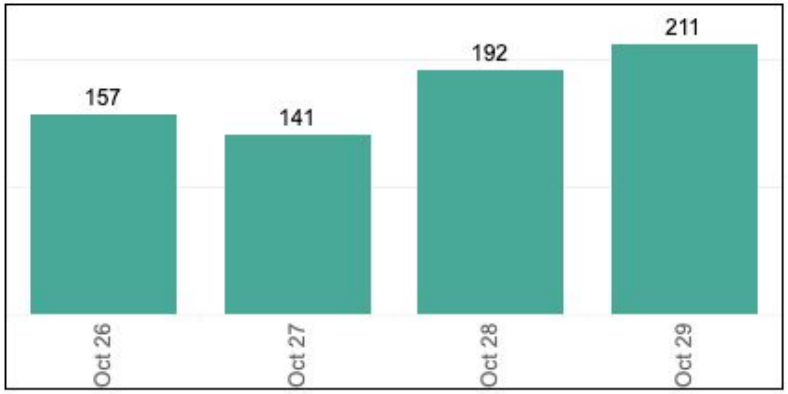

Alberta Health provides daily COVID-19 data updates on their website detailing a number of important statistics for the major health zones in Alberta. Since they do not provide a historical perspective, the Open Data team at the City of Edmonton collect and store the daily data from the Alberta Health website and are able to provide a historical perspective of COVID-19 statistics. The publicly available City of Edmonton COVID-19 Dashboard showcases the latest data along with historical trends for the Edmonton Health Zone. The following two figures reflect what was shown on the summary page of the dashboard as of October 30, 2020 (the images appear side-by-side in the dashboard but are separated to fit into this document).

Edmonton Zone at a Glance

Oct 29

New Cases	211 (19 ▲)
